

## **Sprint 3 Report**

### **Actions to stop doing:**

- 

### **Actions to start doing:**

- While we have made a large amount of progress and completed our MVP, I think that we still need to establish a better form of documentation other than comments. We also have to have all attending meetings, and move our schedules around to accommodate time differences.

### **Actions to keep doing:**

- Our work flow is solid, and we keep in regular communication with each other on the work we have finished and the work we have not finished yet, even outside of meetings which is good. Just need to keep chugging along.

### **Work completed/not completed:**

- **Completed:**
  - All scraping functionality and its testing
  - All necessary GUI functionality
  - Functionality for haploid/diploid genome
  - Store data in Firebase/Capture all snp data
- **Not completed**
  - Filter out junk data

**Work completion rate: .96**
